PROJECTS

LugarAccesible

- Developed and designed a web platform focused on accessibility, which allows people with reduced mobility to obtain information about the accessibility of public and private spaces based on their location.
- Built API for providing detailed information on wheelchair-accessible space based on Fastify, TypeScript and Zod.

AppStudent

- Developed and designed a web platform that consists to provide tools for students just as todo-list, dictionary to look for english words, pomodoro, calendar, calculator.
- Implemented good practices, state management with redux, routing with react-router-dom, and styling with SASS.

E-commerce App

- Developed and designed an e-commerce app, and built API for providing all the products, utilizing NodeJs &TypeScript on the server-side, and the client-side with Vue & TypeScript via an API.
- Implemented design features, state management, router, and CSS methodology like BEM in SASS.
